Directions for use

Read carefully!

Water For Injections

Formulation

Each 100 mL contain:
Water for Injections 100 mL

Pharmaceutical form

Solvent for parenteral use.

Indications

As diluent and vehicle for administration of medications.

Contraindications

As applicable for the particular preparation produced.

Precautions for use

Parenteral solutions must be prepared under conditions guaranteeing that the preparation is sterile.

Special warnings

Water for Injections is strongly hypotonic. It must not be infused as such, otherwise it will cause haemolysis and hypotonic electrolyte disorders.

Dosage

Depending on instructions given for the preparation produced.

For dissolution or dilution of drugs for infusion immediately before administration.

Method of administration

As applicable for the preparation produced.

Overdose

Disorders of electrolyte and water balance occurring after accidental intravenous administration of pure water for injections must be corrected according to the respective analytical values.

If massive haemolysis occurs, appropriate emergency treatment must be instituted immediately.

Undesirable effects

None known.

Cautions

Foods, Drugs, Devices & Cosmetics Act prohibits dispensing without prescription.

Storage

Store at temperatures not exceeding 30°C.

Shelf life

The product must not be used beyond the expiry date stated on the label.
